FOREWORD

This technical documentary report was compiled under Project 7320, "Fibrous Materials for Decelerators and Structures", by Mr. J. H. Ross of the Fibrous Materials Branch, Nonmetallic Materials Laboratory, Directorate of Materials and Processes, Aeronautical Systems Division, Wright-Patterson Air Force Base, Ohio.

ABSTRACT

This report is a collection of papers presented at the Directorate of Materials and Processes "Symposium on Fibrous Materials" held in Dayton, Ohio, on 16-17 October 1962.

The purpose of this symposium was to review the recent progress on both contractual and internal research programs sponsored by the Fibrous Materials Branch of the Nonmetallic Materials Laboratory in the area of new fiber forming substances, protective chemical finishes and coatings and translation of fibers into flexible, high strength materials.

This technical documentary report has been reviewed and is approved.

C. A. WILLIS, Chief
Fibrous Materials Branch
Nonmetallic Materials Laboratory
Directorate of Materials & Processes
